Providing site security and privacy, these smart screening panels are ideal enclosures in public areas such as shopping malls and airports. The solid galvanised panels are 2.2 m wide and supplied with rubber block feet and couplers. Note: When screws are being used externally, additional ballast will normally be required, which is the responsibility of the hirer. Please refer to BS 6399 for notes on compliance. Example: In a town or city, 80km inland and 50m above sea level, each rubber foot requires 366kg of ballast. Other locations and conditions will require greater amounts of ballast.
